1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to Applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Applicant's representative, Mr. Ameya Purohit , of registration number L0550 on December 30, 2009. During the telephone conference, Mr. Ameya has agreed and authorized the examiner to amend Claims 1.

Claims

In claim1, in line 14 "attached to" has been replaced with - - included in- -.

Examiner's statement of reason of allowance

3. Claims 1-11are allowed.
4. The following is an examiner's statement of reasons for allowance:
 - a. The present invention is directed to a method for creating and managing a local network, the local network including at least one restitution device for receiving an encrypted data stream and at least one diffusion and re-encrypting device for transmitting all or part of the encrypted data stream to the

Art Unit: 2437

restitution device, the at last one restitution device and the at least one diffusion and re-encrypting device including at least one security module.

b. The closest prior art, as previously recited,

Maillard et al (U.S. patent 6987854), is directed to a method of encryption of data in digital television system communicated between a first decoder and a portable security module.

Cheriton et al (U.S. patent 7062658), is directed to a method and apparatus for protecting digital content. However, none of Maillard, Cheriton , teaches or suggests, alone or in combination, the particular combination of steps or elements as recited in the independent claims 1. For example, none of the cited prior art teaches or suggest the steps of *securely transmitting the network key over the local network to the at least one security module attached to the at least one restitution device and the at least one diffusion and re-encrypting device, wherein when the master security module is connected to the at least one restitution device, decrypting the encrypted data stream by the at least one diffusion and re-encrypting device, re-encrypting the decrypted data stream by the at least one diffusion and re-encrypting device using a local key, the local key being a session key that is generated by the at least one diffusion and re-encrypting device and that is encrypted by the network key, transmitting the re-encrypted data stream to the at least one restitution device, and decrypting the received encrypted data stream by the at least one restitution device using the associated security module, the associated security module including means to decrypt the local key using the network key.*

Art Unit: 2437

Therefore the claims are allowable over the cited prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
